

# Specialty Optical Fibre Components and Modules

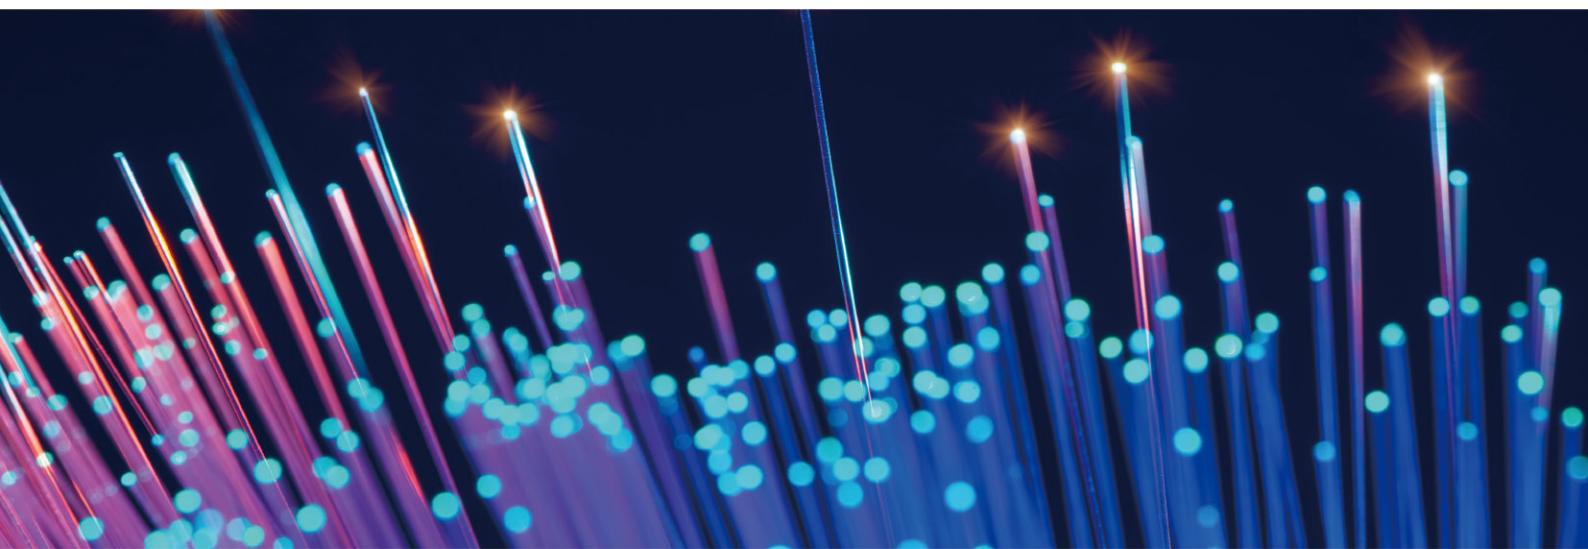

Founded in July 2004, Yangtze (Wuhan) Optical System Corp., Ltd. is a high-tech company with Yangtze Optical Fibre and Cable Joint Stock Limited Company (YOFC) as the largest shareholder. We develop, produce and sell optical fibre devices for optical fibre communications and fibre lasers, and provide relevant services. Our products mainly include fibre bragg gratings (FBG), dispersion compensation fibre modules and related optical devices. We are the first professional manufacturer of dispersion compensation fibres and modules with patented technology in China, and have the right to import and export products. For more than a decade, we have won the recognition and trust of Huawei, ZTE and other users by virtue of our mature technology and reasonable price. Meanwhile, we have been the largest supplier of dispersion compensation fibre modules in the Chinese market for eight consecutive years. Advocating a "practical, pioneering, hard-working, collaborative, and dedicated" corporate culture, implementing the "safety first policy", and through standard management, we provide users with high-tech and environmentally friendly products. This way, we enrich the lives of the general public and advance technology with our products and services.

# Optical Components and Modules for Communication

A close-up photograph of a bundle of optical fibers. The fibers are thin, translucent rods that catch light at their tips, creating small, bright, glowing spots of light. These glowing points are concentrated along the upper portion of the fibers. The background is a solid, deep blue color, which provides a strong contrast to the bright, warm glow of the fiber tips. The overall effect is one of high technology and precision.

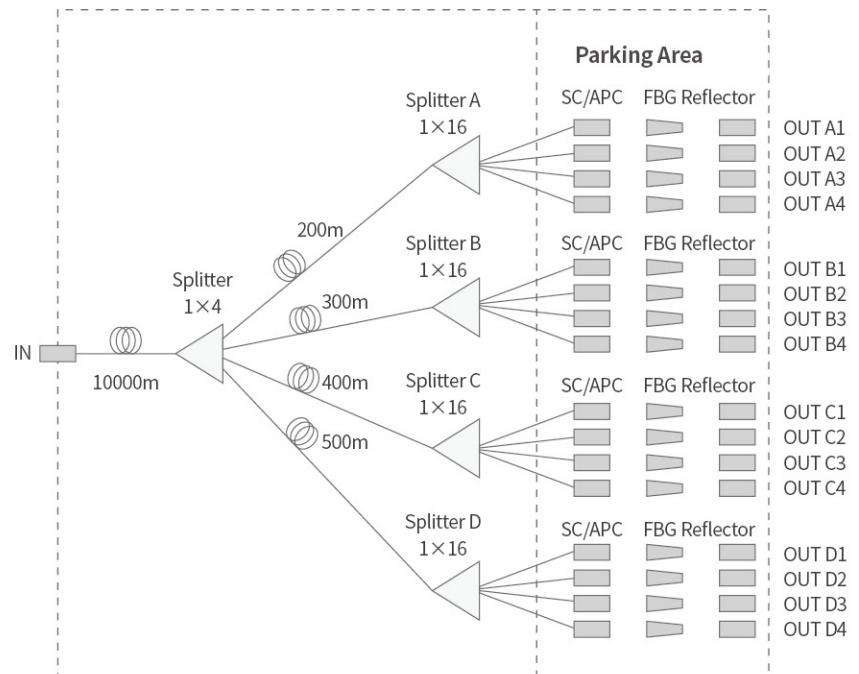

# Fibre Link Component

## OTDR FBG Reflector

OTDR FBG Reflector is based on Fiber Bragg Grating technology with wide bandwidth and low insertion loss to reflect OTDR test signal. When the optical measurement system generates a certain range of wavelength to a Passive Optical Network (PON) which can pass through the FBG, the FBG will reflect its own intrinsic reflection wavelength at 1644.5nm - 1655.5nm.

### Characteristics

- High precision of reflectance at test wavelength
- Low insertion loss at traffic wavelength
- Easy to install
- Exceptional reliability and environmental stability
- Applicable for FTTH, FTTB, FTTC
- Compatible with GPON, EPON, GEPON, 10GEAPON, NGPON

### Applications

- Create high reflectance and wide working bandwidth at the termination of a PON without disturbing traffic
- Test the reflectance from the central office.
- Check optical continuity of a subscriber when being added, or when troubleshooting

## Specifications

Relative Humidity (RH%)	5	95

\*①REF-1650-XX-XX, the first XX means fibre type, the second XX means structure type

\*②Insertion Loss (dB) =  $-10 \log(\text{Output Power} / \text{Input Power})$  [dB]

\*③Return Loss (dB)= $-10 \log(\text{Reflected Power} / \text{Input Power})$  [dB]. To measure the return loss of reflect band, the light of 1650nm should be injected from the female side of reflector

# Optical Fibre Attenuator

The Optical Fibre Attenuator product has the function of fixed attenuator value of 2dB to 15dB, which provides fixed attenuation for the communication system, so that the communication system can achieve the appropriate output power.

## Characteristics

- Selectable diversification of attenuation values (2 dB, 3 dB, 5 dB, 7 dB, 10 dB, 15 dB)
- Cover communication band 1260nm - 1625nm
- Plug structure for easy installation
- Diverse plug types
- Precision attenuation value and high return loss
- Meet or Exceed GR-1221-CORE, GR-1209-CORE, GR-468-CORE standard specification

## Applications

- Optical distribution frame
- Optical network system
- High-speed optical fibre transmission system
- Cable TV (CATV) system
- Long-distance trunk line dense wavelength division multiplexing (DWDM) system
- Optical add / drop Multiplexer (OADM)
- High power optical device measurement

# Ultra-miniaturized Dispersion Compensation Module

In the applications of optical fibre communication and fibre laser, dispersion management is an important means to control optical parameters such as pulse and nonlinear. The ultra-miniaturized dispersion compensation fibre module(SDCM) can compensate the dispersion and dispersion slope at C-band for standard single-mode fiber(G.652) and the system residual dispersion is optimized.

## Characteristics

- 100% slope compensation of G.652 fiber in C-band (Typical)
- Optimized residual dispersion
- Broadband dispersion compensation in DWDM system
- Low insertion loss
- Low Polarization Mode Dispersion
- Small package
- Meet or exceed Telcordia GR-2854-CORE specification
- Meet or exceed Telcordia GR-21221-CORE specification
- Different package styles, connector types and pigtail lengths are available

## Applications

- Long-haul telecommunication systems with standard single-mode fiber (G.652)
- DWDM transmission systems
- SDH transmission system
- Cable AM television video systems
- Dispersion adjusting

## Specifications-1

Product Type	ADCM-10	ADCM-30	ADCM-50	ADCM-70	ADCM-90	ADCM-110

# Ultra-miniaturized DCM for O+E+C Band

The ultra-miniaturized dispersion compensation module for O+E+C band can adjust the dispersion both at O+C-band for standard single-mode fibre (G.652), so as to optimize the residual dispersion of the system. At the same time, the module has ultra-low insertion loss at O+E+C-band.

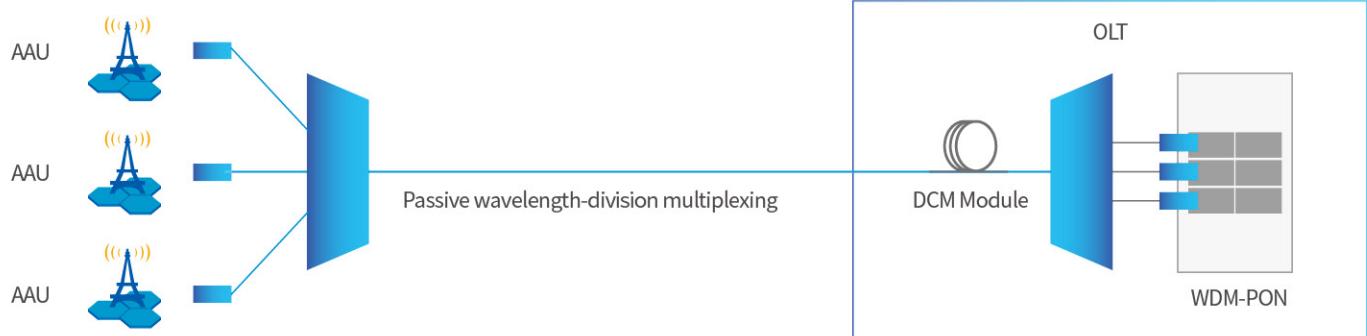

Based on the newest TDCF design, mature and reliable processing technology, the module can improve the performance of optical transmission system. Also, ultra-miniaturized dimensions of the module can meet the requirement of system miniaturization.

## Characteristics

- Broadband dispersion compensation in DWDM system
- Ultra-low insertion loss
- Ultra-low polarization mode dispersion
- Meet or exceed Telcordia GR-2854-CORE specification
- Meet or exceed Telcordia GR-1221-CORE specification
- Ultra-miniaturized dimensions

## Applications

- Adjusting dispersion in O-band for 5G front-haul transmission system
- Long-haul telecommunication systems with standard single-mode fibre (G.652)
- DWDM transmission system
- SDH transmission system
- Cable AM television video system

## Specifications

Product Type	AD-1KM	AD-2KM

# Fibre Amplifier Component

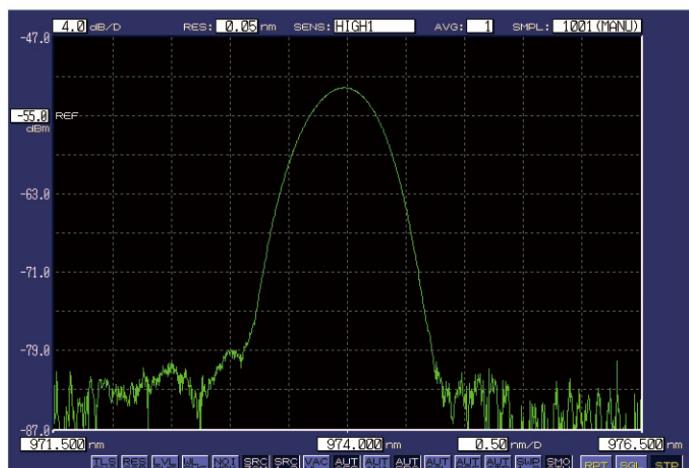

## FBG for 980nm Pump Laser

The FBG for 980nm pump laser is written by UV light within the fibre (SMF) core. The FBG as pigtail is connected to the 980nm pump laser diode, providing external cavity feedback, which make the pump laser wavelength locked at the center wavelength of FBG. Due to the low temperature sensitivity of FBG, the stability of 980nm pump laser wavelength can be greatly improved, and the temperature control of 980nm pump laser is unnecessary. As the narrows the bandwidth of the 980nm pump laser output, the ratio of the output power within the erbium ion absorption band can be increased , thereby increasing the efficiency and the stability of the pump laser.

## Characteristics

- High-precision control of the reflective wavelength, within  $\pm 0.25\text{nm}$
- High-precision control of the reflectivity, within  $\pm 0.5\%$
- Side lobe suppression ratio up to -25dB to -30dB by apodization, better than the industry standard

Spectrum of Grating Reflection

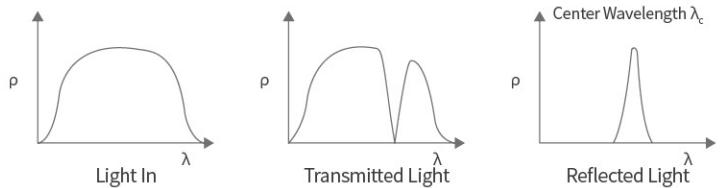

## FBG

### Applications

- FBG for 980nm pump laser is used to lock output wavelength. Due to the low temperature sensitivity of FBG, the stability of output wavelength and the efficiency of 980nm pump laser can be greatly improved.

Spectrum Response

### Specifications-1

Product Type	FBG-9740-020-05-C1212

Maximum Pump Power Through the Grating (W)	1		
FBG Length (m)	2 - 4 or As Requested		

\*①Centre wavelength  $\lambda_c$  are available as requested from 973nm to 976nm

\*②Peak reflectivity @ $\lambda_c$  are available as requested from 0.5% to 10%

\*③Reflectivity bandwidth(FWHM) are available as requested from 0.1nm to 1.0nm

# Optical Fibre Isolator

The optical fibre isolator is a passive optical device that only allows unidirectional light to pass through. Its working principle is based on the non-reciprocity of the Faraday rotating crystal, and the echo can be well isolated by the fibre isolator. The fibre isolator has the characteristics of high isolation, low loss, and high reliability.

## Characteristics

- Low insertion loss
  - High isolation
  - High stability and reliability
  - High return loss
- CATV system
  - Communication system
  - Optical fibre sensing system
  - Test system

## Specifications

Product Type	ISO-S-1550-1-1-50-XX-N	ISO-D-1550-1-1-50-XX-N
Operating Wavelength (nm)	1550	
Operating Bandwidth (nm)	± 20	
Optical Properties		
Power Handling (W)	5	
Isolation (dB)	≥ 29.00	≥ 46.00
Insertion Loss (dB)	≤ 0.45	≤ 0.60
Polarization Dependent Loss (dB)	≤ 0.10	≤ 0.15
Return Loss (dB)	≥ 55.00	≥ 55.00
Polarization Mode Dispersion (ps)	≤ 0.25	≤ 0.05
Environmental Properties		
Operating Temperature (°C)	-5 to +70	
Storage Temperature (°C)	-40 to +85	
Relative Humidity (RH%)	5 - 95	
Appearance		
Dimensions (mm)	Ø5.5×35.0, Ø5.5×30.0, 8.0×12.0×70.0	
Fibre Length (m)	1.0 or Customized	

\*The parameters do not include a connector, and the fibre connector insertion loss is 0.33dB

\*XX in the product type means dimensions

# Tapering Wavelength Division Multiplexer

The wavelength division multiplexer (WDM) is a device that multiplexes different optical signals into a beam which transmits along a single optical fibre. At the receiving end, de-multiplexing is used to separate optical signals from different wavelengths. The WDM adopts the parallel fusion tapering method and has high isolation and high reliability.

## Characteristics

- Low excess loss
- Small volume
- High stability and reliability

## Applications

- Fibre amplifier system
- Wavelength division multiplexing system
- Test system

## Specifications

Product Type	WDM-1-1-3-2
Operating Wavelength (nm)	980/1550
Operating Bandwidth (nm)	± 20
Optical Properties	
Insertion Loss (dB)	≤ 0.15
Polarization Dependent Loss (dB)	≤ 0.10
Isolation (dB)	≥ 20.0
Return Loss (dB)	≥ 55.0
Directional (dB)	≥ 55.0
Environmental Properties	
Operating Temperature (°C)	-5 to +70
Storage Temperature (°C)	-40 to +85
Relative Humidity (RH%)	5 - 95
Appearance	
Dimensions (mm)	Ø3×35, Ø3×45, Ø3×54
Fibre Length (m)	1.0±0.1 or Customized

# CWDM Mux/Demux Module

Coarse wavelength division multiplexer (CWDM) is a low-cost WDM transmission technology for metro and access networks. In principle, CWDM is to use optical multiplexer to multiplex optical signals of different wavelengths into a single fibre for transmission. At the receiving end of the link, with the help of demultiplexer, the mixed signals in the fibre are decomposed into signals of different wavelengths and connected to the corresponding receiving equipment. Using thin film filter technology, it has the characteristics of high isolation and high reliability.

## Characteristics

- Low insertion loss, high isolation
- Excellent thermal stability
- Telcordia compliant
- RoHS compliant

## Applications

- CWDM system
- Metro and Access networks
- CATV

## Specifications

# Optical Fibre Combiner

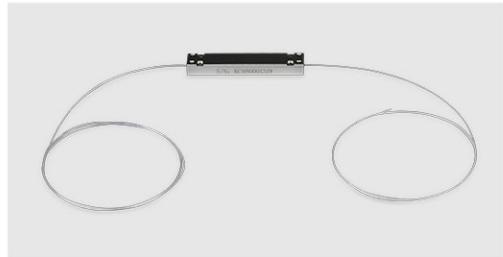

The multi-mode pump combiner is designed for high power EDFA. Excellent optical properties are obtained by the use of unique fusion tapering process. The input port includes two pump channels, and one signal channel, and the output port is double cladding fibre. The fibre type can be customized.

## Characteristics

- High pump efficiency
- Low insertion loss
- Customized

## Applications

- CATV system
- Communication system

## Specifications

Product Type	MPC1-P12-S476	MPC2-P12-S476
Product Discription	(1+1) ×1 Optical Fibre Combiner	(2+1) ×1 Optical Fibre Combiner
Signal Operating wavelength (nm)	1500 - 1600, Typical 1550

# Optical Amplifier Module

## MSA EDFA Gainblock

MSA EDFA gainblock is a kind of signal optical amplifier with compact size, which can be utilized in a variety of fields. The electrical circuit is integrated inside the module. The default control mode is AGC.

### Characteristics

- Wide operating bandwidth
- Low noise figure
- High stability and reliability
- Customized

### Applications

- Metro network and optical access network
- DWDM transmission system

### Specifications

Product Type	ERA-M-C-GBN-XX/XX-1-1/1 *①		
Parameters	Minimum	Typical	Maximum

Polarization Mode Dispersion (ps)	-	-	0.5
Operating Temperature (°C)	-5	-	55
Storage Temperature (°C)	-40	-	85
Power Consumption (W)	-	-	5
Communication Interface	RS232		
Electric Connector	20pins		
Optical Connector	LC/UPC or customized		
Pigtail Length (cm)	> 50		
Dimension (mm)	90(L) × 70(W) × 15(H)		

\*① ERA-M-C-GBN-XX/XX-1-1/1, the first XX means output power, and the second XX means gain

# H-MSA EDFA Module

H-MSA EDFA module is a kind of signal optical amplifier designed for DWDM transmission system with compact size, which can be integrated into EDFA card or sub rack flexibly. The control mode is ACC/APC/AGC. The high-reliability components and temperature controlling technique ensure the product excellent thermal performance under a wide temperature range.

## Characteristics

- Compact size
  - Wide operating bandwidth
  - Low noise figure
  - High stability and reliability
  - Customized
- Metro network and optical access network
  - DWDM transmission system
  - 40G/100G/200G system

## Applications

# MSA Fixed Gain EDFA Module

MSA fixed gain EDFA module is a kind of signal gain module with compact size, which has been widely utilized in DWDM transmission system. The control mode is ACC/AGC/APC. The high-reliability components and temperature controlling techniques ensure the product excellent thermal performance under a wide temperature range.

## Characteristics

- Compact MSA size
- Wide operating bandwidth
- Low noise figure
- Low power consumption
- Customized

## Applications

- Metro network and optical access network
- DWDM transmission system

## Specifications

Product Type	ERA-M-C-GB-var/XX-1-1/1 *①		
Parameters	Minimum	Typical	Maximum

# MSA Variable Gain EDFA Module

MSA variable gain EDFA module is specially designed for DWDM transmission system. The module can adjust gain flexible according to requirement and keep gain flatness. The control mode is ACC/APC/AGC. The high-reliability components and temperature controlling techniques ensure the product excellent thermal performance under a wide temperature range.

## Characteristics

- Gain flatness with adjustable gain
- Wide variable gain range
- Low noise figure and power consumption
- Control mode AGC/APC/ACC
- Customized

## Applications

- Metro network and optical access network
- DWDM transmission system

## Specifications

Product Type	ERA-M-C-GB-XX/var-1-1/1 *①

# C+L Band EDFA Module

C+L band EDFA module can amplify C band and L band signal simultaneously. The module can realize low noise figure and excellent gain flatness. The control mode is ACC/APC/AGC. The high-reliability components and temperature controlling techniques ensure the product excellent thermal performance under a wide temperature range.

## Characteristics

- C&L band operating bandwidth
- Low noise figure and power consumption
- High stability and reliability
- Control mode ACC/APC/AGC
- Customized

## Applications

- Metro network and optical access network
- DWDM transmission system
- Universities and Institutes

## Specifications

Product Type	ERA-M-C/L-GB-XX/XX-1-1/1 *①		
Parameters	Minimum	Typical	Maximum

# Mini EDFA Module

The Mini EDFA module is a single-channel or narrow-band signal amplifier module specially designed for the telecom market. The module offers XFP or QSFP compact package, which supports up to 21 dB gain and 15 dBm output power. The control mode is ACC/APC.

## Characteristics

- ACC/APC control mode

- Ultra compact structure, ultra low loss

- High stability and reliability

- Customized

## Applications

- Telecom or datacom

- CATV or SDH system

## Specifications

Product Type	ERA-S-C-SFP-XX/XX-6-1/6 *①		
Parameters	Minimum	Typical	Maximum

# High Power EYDFA Module

The high-power eydfa module adopts two-stage amplifier structure, and the maximum output power can reach 40dBh. The module works in the mode of ACC/APC/AGC. Taking advantage of high precise temperature control technique, the module has great thermal properties in a broad range.

## Characteristics

- High power output
- ACC/APC/AGC control mode
- High stability and high reliability
- Customized

## Applications

- CATV
- FTTH
- Doppler radar system
- Universities and institute

## Specifications

# Optical Amplifier

## Benchtop Optical Amplifier

Benchtop optical amplifier is specially designed for laboratory and factory testing. Highly stable components and optical path design are adopted to ensure high-performance spectral characteristics. Unique ATC and APC control mode provide stable output power. The benchtop amplifiers with excellent microprocessor control make the operation and remote control simple and intelligent.

### Characteristics

- High output power to 20 dBm
- Low noise figure and power consumption
- Control mode ACC/APC/AGC
- High reliability and stability
- Customized

### Applications

- Factory testing
- Universities and institutes

# High Power EYDFA System

## 50EYA Series 1U High Power EYDFA

The 50EYA series EYDFA is an optical amplifier offering multi-port signal amplifier ranging from 1535 nm to 1565 nm. The amplifier is designed for applications of CATV and applications of 1-8 continuous band channel (ITU wavelength). It can operate at single wavelength in CATV and triple wavelength in WDM systems. This equipment of great importance in CATV backbone network can realize flat transmission in DWDM system. It supplies a flexible and low-cost solution for large-area FTTH coverage of the CATV system in large and medium cities.

### Characteristics

- Low NF pre-amplification, no cascade required, reduced CNR and MER
- Output power adjustable from 23 dBm to 37 dBm
- Perfect net management interface, compatible with SNMP protocol
- Double power supply, automatic temperature control
- LCD, on-site parameter monitoring
- High stability and reliability

### Applications

- CATV
- FTTH

## Specifications

Product Type	EYA-S-C-1U-XX/XX*①		
Parameters	Minimum	Typical	Maximum

# 50EYA Series 2U High Power EYDFA

The 50EYA series EYDFA has high output power. Operating wavelength ranging from 1535 nm to 1565 nm on this amplifier is designed for CATV and applications of 1-8 continuous band channel. This equipment is very important in CATV backbone net building. It can operate at a single wavelength in CATV and three wavelengths in WDM systems and realize flat transmission in DWDM. It supplies a flexible and low-cost solution for large-area FTTH coverage of the CATV system in big and medium cities.

## Characteristics

- Output power from 33 dBm to 40 dBm
- APC/ACC/AGC control
- Low NF pre-amplification, no cascade required, reduced CNR and MER
- Output power adjustable from 0.5 dBm to 4 dBm
- Completed net management interface, compatible with SNMP protocol
- Double power supplies, automatic temperature control
- LCD, on-site parameter monitoring
- High stability and reliability

## Applications

- CATV
- FTTH
- Doppler lidar system

# 50EYA Series 3U High Power EYDFA

The 50EYA series EYDFA has high output power. Operating wavelength ranging from 1535 nm to 1565 nm on this amplifier is designed for CATV and applications of 1-8 continuous band channel. This equipment is very important in CATV backbone net building. It can operate at a single wavelength in CATV and three wavelengths in WDM systems and realize flat transmission in DWDM. It supplies a flexible and low-cost solution for large-area FTTH coverage of the CATV system in big and medium cities.

## Characteristics

- Max output power 43 dBm
- Low NF pre-amplification, no cascade required, reduced CNR and MER
- Parameters can be set to fulfill the different net design
- The internal optical switch can be added to expand device capability
- Output port channels from 32 to 128, WDM available
- Low noise figure: 5 dB@3 dBm input
- Completed net management interface, compatible SNMP protocol
- Double power supplies, automatic temperature control
- Output power adjustable from 0.5 dBm to 4 dBm
- True color LCD

## Applications

- CATV
- FTTH
- Doppler lidar system

# Optical Components for Fibre Laser

# Fibre Laser Component

## (2+1)×1 Optical Fibre Combiner

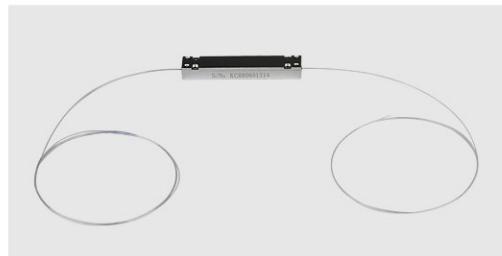

The product is designed for high power fibre laser. Unique tapering process is adopted to acquire good optical properties. The input port includes two pump channels and one signal channel, and the output port is double cladding fibre. The fibre type can be customized.

### Characteristics

- High transmission efficiency
- High pump efficiency
- Small mode distortion
- Low insertion loss
- Can be customized

### Applications

- Optical fibre amplifier power coupling

### Specifications

Parameters	Index			
Product Type	MPC2-P12-S322	MPC2-P12-S333	MPC2-P12-S344	MPC2-P12-S355
Signal Operating Wavelength (nm)	1000 ~ 1100, Typical 1064			
Pump Operating Wavelength (nm)	800 ~ 1000

# Fibre Bragg Grating for Fibre Laser

FBG(Fibre Bragg Grating) is a periodic refractive index modulation in optical fibre core through UV exposure which can achieve the modulation of signal light in optical fibre. It is an indispensable part of a high power fibre laser.

## Characteristics

- Low temperature slope is less than  $0.01^{\circ}\text{C} / \text{W}$  under 915 nm pump power
- Central wavelength 1064nm or 1080nm
- Bandwidth operational  $0.1\text{nm} \sim 3.2\text{nm}$
- Wavelength mismatch within 0.2nm
- Fibre type can be customized

## Applications

- High power fibre laser

## Specifications-1

### 10/130 FBG

Product Type	FBG-1064-995-25-J0505-H	FBG-1064-100-10-J0505-O
FBG Attribute	HR	OC
Center Wavelength (nm)		$1064 \pm 1$
Peak Reflectivity (%)	$\geq 99.5$	$10 \pm 2$
Bandwidth (FWHM) (nm)	2.0 - 3.0	0.6 - 1.0
Wavelength Match (nm)		$< 0.2$
Side Mode Suppression Ratio (dB)		$> 10$
Fiber Type		YOFC GDF-10/130 or Customized
Signal Power Handling (W)		100
Package Type		Recoated Only
FBG Pigtail Length		Each side 0.5m or Customized
